

Migrate Your Data To An AWS Serverless Database in Less Than 4 Weeks

As your organization generates an influx of structured, semi structured and/or unstructured data from your business operations, and you look to extract value, speed to execution and intelligent insights should be top of mind. To migrate and leverage your data, meeting the needs of modern analytics you will require a platform with agility and scale that will allow you to store and leverage virtually limitless datastores. For accelerated time to value, whether it is to report, analyze, process or leverage machine learning to solve complex problems, AWS Data Lake circumvents the limitations and complexities of legacy solutions, allowing users the ability to focus on value and solving business.

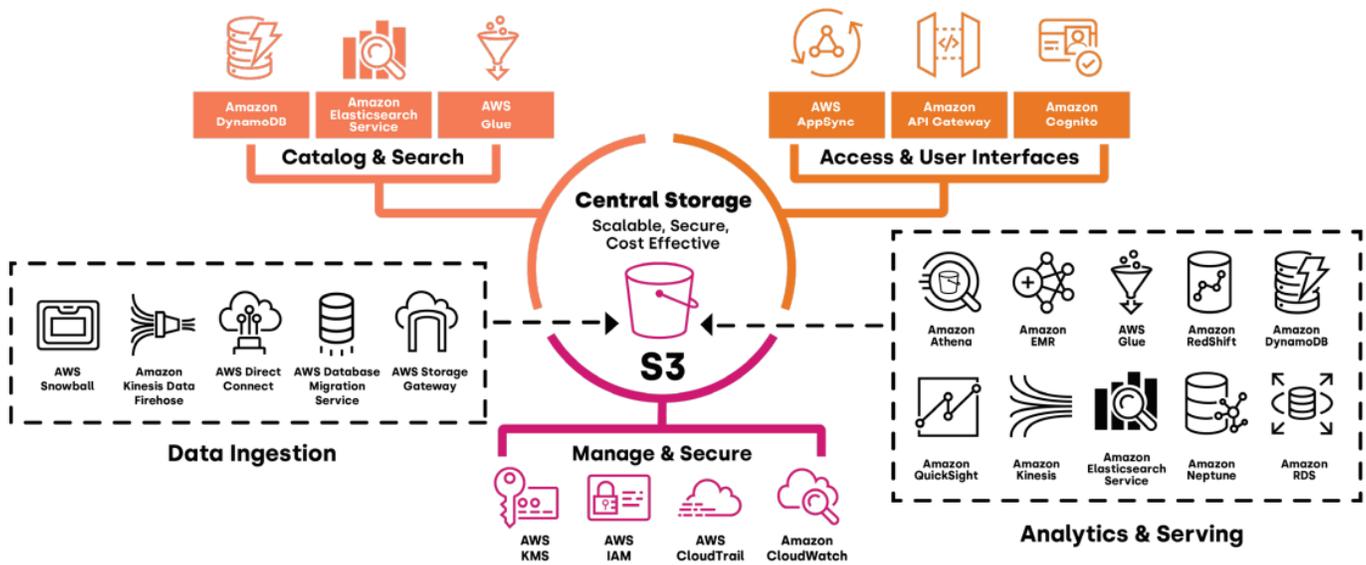

Solution

Adastra will migrate your data to a secure, resilient, affordable and virtually limitless storage platform, allowing you to bring all relevant data into scope, without restriction. With the scale of AWS Data Lake and AWS Glue, as well as a set of curated best practices and accelerators from Adastra's 20+ year experience, we will prepare, migrate and deploy your Data in a serverless data lake within 4 weeks, immediately allowing you to extract insights.

With Adastra implementing AWS Datalake, you can expect:

- A secure storage platform flexible to leverage all kinds formats of data
- Ingestion of large number of datasets in a short timeframe
- Tools for successful follow through on different business initiatives and use cases
- A serverless platform, scalable and easy to manage
- Options to implement a business glossary to facilitate improved understanding and usability of data

Extended Data Lake Architecture
